Facility Duty of Care and Contact Tracing Solutions

The COVID-19 pandemic has caused companies to pivot drastically in the recent months, from forcing closures to adapting to remote work to navigating how to safely reopen. While some businesses have been able to shift most employees to remote work, many organizations still need to operate in-person in order to function. Companies across all industries are now faced with the same challenge: What adjustments can be made to existing office infrastructure to ensure employees health and safety are top priority?

Global Guardian is now providing Facility Duty of Care and Contact Tracing solutions to provide clients with turn-key technology needed to alert employees in real-time of potential infection and prevent further spread should a colleague test positive for COVID-19.

Global Guardian's COVID-19 solution combines automated counting technology, a web-based reporting dashboard, and real-time communications tools to help you:

Manage real-time occupancy & social distancing in your facility

Track and verify COVID-19 compliance

Optimize staffing and cleaning procedures

Keep employees informed of COVID-19 initiatives

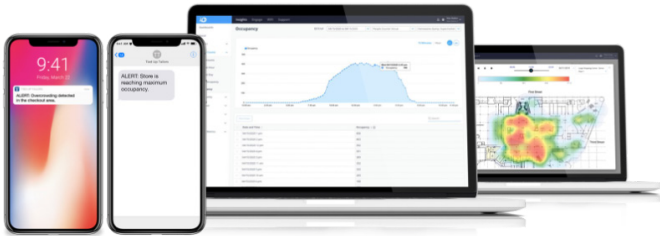

Facilitate contact tracing

Our 24/7 Operations Center is comprised of highly experienced former military special operations and federal law enforcement personnel and seasoned business professionals. Based upon your requirements and needs, we can customize support to fulfill your organizational duty of care obligations and protect your people, assets, and communication.

How It Works

Global Guardian can provide a complete end-to-end solution suited to be flexible and meet the desired objectives of the company. Our team utilizes Bluetooth Low Energy (BLE), the same technology as Google and Apple. With three different technology options to choose from, we can customize and implement a solution from the ground up or integrate with your existing hardware and infrastructure.

Automated Occupancy Management

Ideal for large facilities or office buildings, display when it is safe to enter a space based on live occupancy counts, and free up staff from manually controlling occupancy at entrances, restrooms, and communal spaces.

Provide Assurance for Employees Returning to Work

Improve the effectiveness and responsiveness of your COVID-19 countermeasures, and give employees confidence that you are actively maintaining a safe environment.

Optimize Staffing Costs

Reduce operational costs, and minimize the risk of exposure for customers and staff by more accurately adjusting staff levels to meet demand.

Facilitate Contact Tracing & Testing

Segment customers and staff by visitation history, and inform those that might have come into contact with a confirmed COVID-19 case while onsite.

Automated Staff Alerts

Enable staff to maintain a safe environment by automatically alerting them when congestion is detected in an area, or occupancy counts cross a threshold.

Verify COVID-19 Compliance

Review occupancy counts to ensure compliance with company policies and COVID-19 regulations.

Real-time Occupancy Management

Enable staff to accurately maintain safe occupancy and social distancing guidelines.

Optimize Routine Cleaning Schedules

Understand your busiest hours of the day and days of the week, and optimize scheduling of routine cleaning and sanitation procedures.

Reach Out and Get Started

STEP 1: Inquire

Global Guardian is standing by ready to support. **Contact us today at businessdevelopment@globalguardian.com** to start the process of ensuring your employees return to work safely.

STEP 2: Evaluate
